ELEKTRONİK II (Metin Yazgı) 1.YILİÇİ SINAVI 2009-2010 BAHAR 16.03.2010

Şekildeki devrede kullanılan tranzistor için (aktif bölge için) V_{BE}≅0.6V, β=100 değerleri verilmiştir. V_T≅26mV alınacaktır.

- 1) Tranzistorun I_C akımının DC değerini bulunuz. (10Puan)
- 2) Tranzistor üzerinde harcanan DC gücü bulunuz.(10Puan)
 Not: Aktif bölgede çalışan bir tranzistor için DC güç değeri: P_{DC}≅V_{CE}xI_C
- 3) Devrenin ac durumunu çiziniz.(10Puan)
- 4) vc/vb, ve/vb ve vc/ve ac kazançlarını bulunuz.(15Puan)
- 5) r1, r2 ve r3 ac görünen dirençleri bulunuz.(15Puan)
- 6) Şekildeki devreden iki adet kullanılarak kaskat bir yapı elde edilecektir. 1. katın girişi baz çıkışı emetör olacaktır. 2.katın girişi emetör çıkışı kollektör olacaktır. Dolayısıyla kaskat iki kattan oluşan devrenin girişi baz çıkışı kollektör olacaktır. Toplam kazancı bulunuz. (15Puan) Not: Birden fazla devre birlikte kullanıldığında referanslarının birbirine kısa devre edildiği unutulmamalıdır.
- 7) 6. soruda elde edilen kaskat yapının ac modelini bulunuz.(10Puan)
- 8) Şekilde verilen devreden iki adet kullanılacak ve kullanılan devrelerdeki tranzistorların emetörleri birbirine kısa devre edilecektir (emetörlerdeki kondansatörler kullanılmayacaktır). Devrelerde vb düğümleri ile referans arasına ac kaynak bağlanacaktır. 1.devrenin vb düğümüne bağlanan ac kaynak v1, 2.devrenin vb düğümüne bağlanan ac kaynak v2 olarak isimlendirilecektir. v2 kaynağının bağlandığı devrenin kollektör çıkışında oluşacak ac gerilimi v1 ve v2 cinsinden bulunuz.(15Puan)
